

Sewage Sludge (Biosolids) Annual Report

EPA Regulations – 503.18, 503.28, 503.48

INSTRUCTIONS

EPA's sewage sludge regulations ([40 CFR part 503](#)) require certain POTWs and Class I sewage sludge management facilities to submit to an annual biosolids report. POTWs that must submit an annual report include POTWs with a design flow rate equal to or greater than one million gallons per day, and POTWs that serve 10,000 people or more. This is the biosolids annual report form for POTWs and Class I sewage sludge management facilities in the 42 states and all tribes and territories where EPA administers the Federal biosolids program.

For the purposes of this form, the term 'sewage sludge' also refers to the material that is commonly referred to as 'biosolids.' EPA does not have a regulatory definition for biosolids but this material is commonly referred to as sewage sludge that is placed on, or applied to the land to use the beneficial properties of the material as a soil amendment, conditioner, or fertilizer. EPA's use of the term 'biosolids' in this form is to confirm that information about beneficially used sewage sludge (a.k.a. biosolids) should be reported on this form.

Please note that questions with a (*) are required. Please also note that EPA may contact you after you submit this report for more information regarding your sewage sludge program.

Questions regarding this form should be directed to the NPDES Electronic Reporting Helpdesk at:

- NPDESeReporting@epa.gov OR
- 1-877-227-8965

2.2 Biosolids or Sewage Sludge Analytical Methods

EPA regulations specify that representative samples of sewage sludge that is applied to the land, placed on a surface disposal site, or fired in a sewage sludge incinerator must be collected and analyzed. These regulations also specify the analytical methods that must be used to analyze samples of sewage sludge. For example, EPA requires facilities to monitor for the certain parameters, which are listed in Tables 1, 2, 3, and 4 at [40 CFR 503.13](#) and Tables 1 and 2 [40 CFR 503.23](#). See also [40 CFR 503.8](#).

Please check the box next to the following analytic methods used on the sewage sludge or biosolids generated or produced by you or your facility during the reporting period (check one or more that apply). *

Biosolids Monitoring Data

INSTRUCTIONS: These monitoring data should be representative of the sewage sludge that was applied to land or placed on a surface disposal site during the reporting year see [40 CFR 503.8\(a\)](#). This section uses the frequency of monitoring requirements in [40 CFR 503.16](#) and [503.26](#). The following codes can be used as data qualifiers: T = Too Numerous to Count, E = Estimated, N = No Data.

Maximum Pollutant Concentration Data for All Sewage Sludge Applied to Land *

This section summarizes the maximum pollutant concentrations in sewage sludge that was applied to land during the reporting year. In accordance with [40 CFR 503.13\(a\)](#), EPA's sewage sludge regulations prohibit land application of bulk sewage sludge or sewage sludge sold or gave away sewage sludge in a bag or other container when one or more sewage sludge pollutant concentrations in the sewage sludge exceed a land application ceiling pollutant limit (see [Table 1 of 40 CFR 503.13](#)). In order to identify noncompliance, EPA will compare the pollutant concentrations in this section against the ceiling concentration limits in Table 1 of [40 CFR 503.13](#).

Goleta Sanitary District produced a small amount of Class A biosolids during 2015. Biosolids dredged from the stabilization basins and solar dried in the sludge drying beds are tested and given away as "Class A Biosolids of Exceptional Quality". These biosolids are to be used in home lawns and gardens, and as such, they are exempt from the General Requirements and Management Practices of 40 CFR Part 503 Sections 503.12 and 503.14, respectively. Throughout 2016 a total of 9.6 cubic yards (3.5 dry metric tons) of biosolids were distributed to the local community. These Biosolids were tested for Enteric Virus and Helminth Ova during 2015 prior to making it available for give away. The test dates were: 3/24/15 and 11/10/15 with both test results of <1 pfu/4g TS and <1 Viable Ova/4g TS. The biosolids were also tested for fecal coliforms on 6/10/15 and 1/26/16 with results of < 1.8 MPN/g for both tests. In addition, the biosolids were tested for metals which were all below the 503.13 Table 3 limits. All analytical test results are available upon request.
